

WE ARE HIRING!

iSecurity Inc. is looking to hire a **senior and/or intermediate cybersecurity consultant**. The successful candidate will have strong technical expertise combined with excellent verbal and written communication skills. Business acumen and pragmatic approach to implementing security controls that balance cost benefit analysis and business impact is a must.

SUMMARY OF ESSENTIAL JOB FUNCTIONS:

- Conduct cybersecurity assessments and audits using many different methodologies including HTRA, NIST 800-30, ISO 27005, CMM maturity models
- Develop governance frameworks, policies, standards and procedures. Familiarity with ISO 27001/2 information security management system is mandatory.
- Provide technical expertise in the areas of network and application security. Understanding of common application vulnerabilities (e.g. OWASP top 10) and networking (e.g. common layer 2 technologies, TCP/IP stack, routing) is required.
- Design and document security architecture and security zones for complex IT solutions and systems.
- Communicate with C-level (e.g. CIO) to provide advise and recommendations for CISO as a Service engagements.
- Produce detailed PowerPoint presentations for kickoff, summary of findings, executive presentations.
- Educate and communicate security requirements, policies, standards and procedures to business/internal stakeholders as it relates to projects and strategic initiatives.
- Research and improve your knowledge base of current technology advancements, trends and directions and identify the potential threats and exposures to our clients.

QUALIFICATIONS:

- 7+ Years of cybersecurity experience for senior consultant
- Experience with all domains of cybersecurity, including governance, identity and access management, monitoring, auditing, network security, appliatoin security, cloud, end-point protection, incident response, data encryption, disaster recovery.
- Familiarity with cybersecurity control baselines is required: ISO 27002, NIST 800-53, CIS benchmarks
- Expertise in public cloud technologies: Azure, AWS, GCP is highly desirable
- A bachelor's degree or Colledge diploma in computer science, cyber-security or a related field including engineering or other exact science filed is preferred
- Certified Information Systems Security Professional (CISSP) accreditation is preferred
- Strong knowledge on NIST Cybersecurity Framework (i.e. NIST 800-53) and ISO-27001/2 Standards
- Strong communication and presentation skills - Fluent in both, written and spoken English

NICE TO HAVE –

- Knowledge of Healthcare Industry
- Knowledge of GDPR, PCI
- Bilingual – French, Portuguese, Urdu
- Certifications: CISSP, CISM, SSCP, Certified in Risks and Information Systems Control (CRISC), cloud security certifications, ISO-27001 lead auditor or implementer.
